BOLD IDEAS I CREATIVE PEOPLE I INNOVATIVE SOLUTIONS

SOFTWARE INTEGRATION + CUSTOMIZED SOLUTIONS

- Systems Architecture
- Build your API's
- Custom Software Development
- Third Party Integrations
- Integration
- Data Management
- SaaS Products
- Analytics & Reporting

INTEGRATION

API. Custom Component.

Integration is all about connecting the dots.

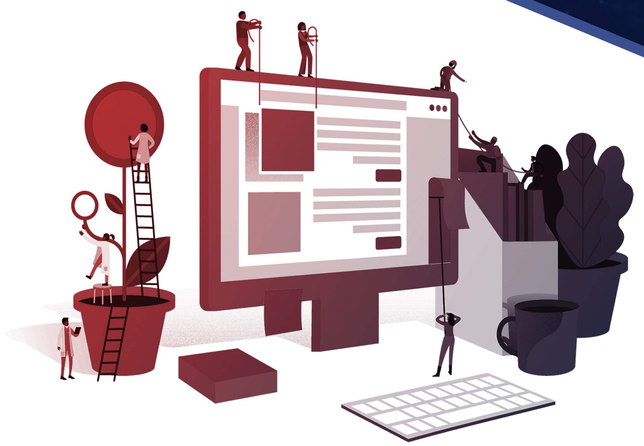
CONNECT THE DOTS and Extend Your Business Systems.

Whether you consolidate your existing systems or integrate new systems to them, you can count on our experience, and a unique approach with which we follow the API architecture & development process to provide you a complete managed solution. Add value to your existing solutions by combining various software modules, your custom programs with other software components to enhance the functionality and user experience.

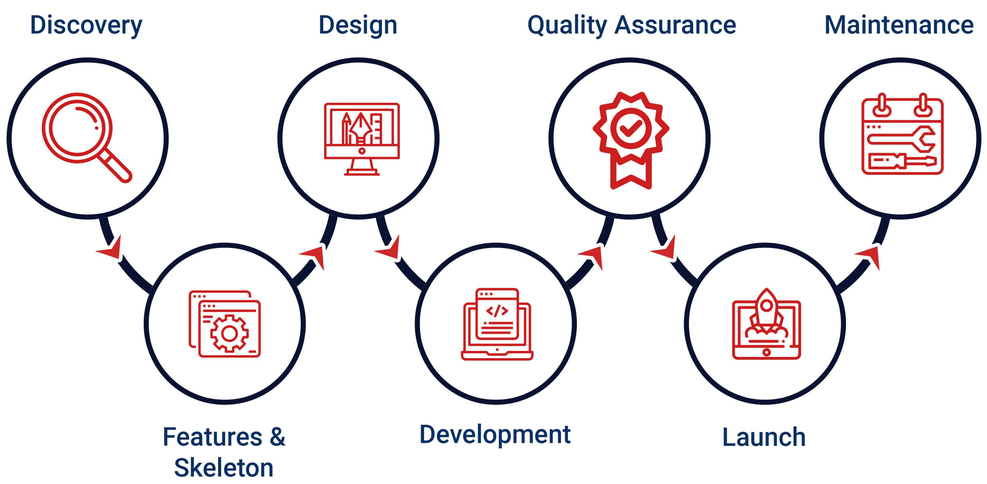
SOFTWARE & ANALYTICS

CUSTOM PRODUCT

Idea + Plan + Build = Custom Product



Get off the ground with a custom-tailored solution to fit your business needs. Off-the-shelf products may not be best suited for all. Leverage our experience and expertise to build your custom product.

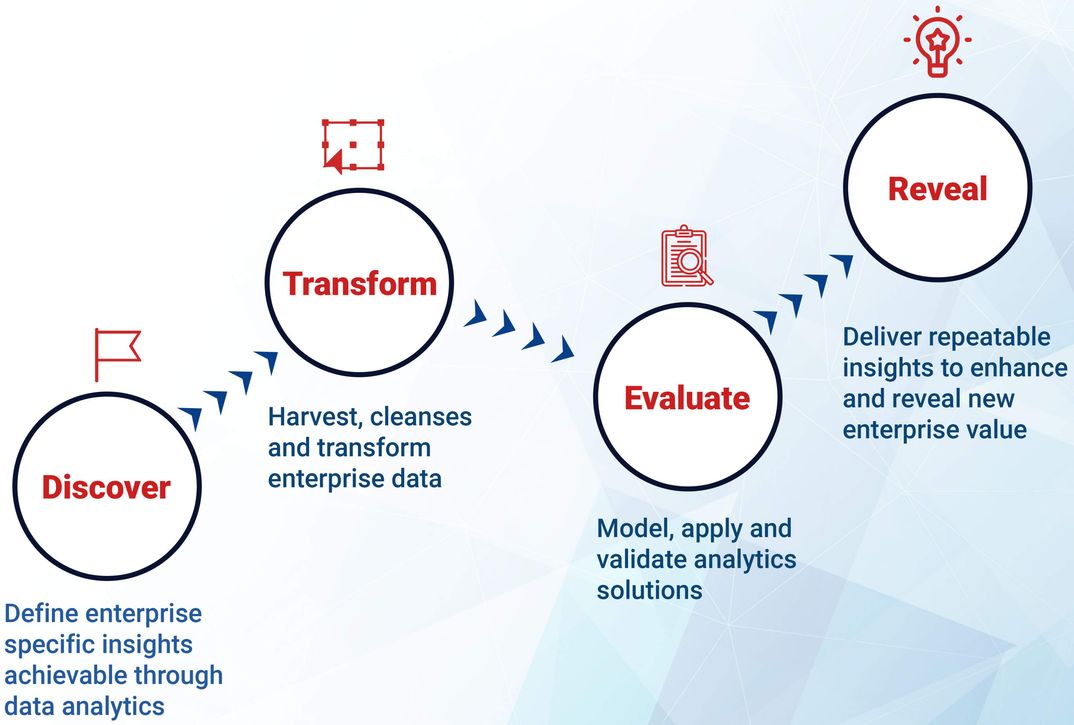


ANALYTICS

Business Intelligence. Data Mining. Predictive Analytics.

IT'S ALL ABOUT DATA!

Add value to your data with powerful Analytics & Reporting. Our team performs analytics by fetching the data, analyzing it for valuable insights into business performance, and generates powerful Reports.



SOFTWARE TESTING & QA

BEING SOFTWARE CONNOISSEURS!

Our software testing and quality assurance services ensure that you achieve quality at speed, functionality and flawless user experience.

We offer assurance about bug-free applications for optimum operational performance and user experience. Our team of expert test engineers follows a robust full-cycle software testing model and stringent quality standards, to track and fix bugs.

OUR ACTIONS START FROM WHERE OTHERS' END!

Yes, our role starts at the last leg of the software development run.
The testing journey begins where development journey ends which indicates that it requires a much higher level introspection for the completely functional and flawless product.

We perform automation using Selenium WebDriver in JAVA/Python, following TDD (Test Driven Development) or BDD (Behavior Driven Development) approach. We use frameworks like Maven, TestNG/JUnit, Cucumber, etc.
Automation creates a regression suite, which saves a great deal of testing time, while performing re-testing/regression testing.

DEALING WITH BUGS DUG IN CODES

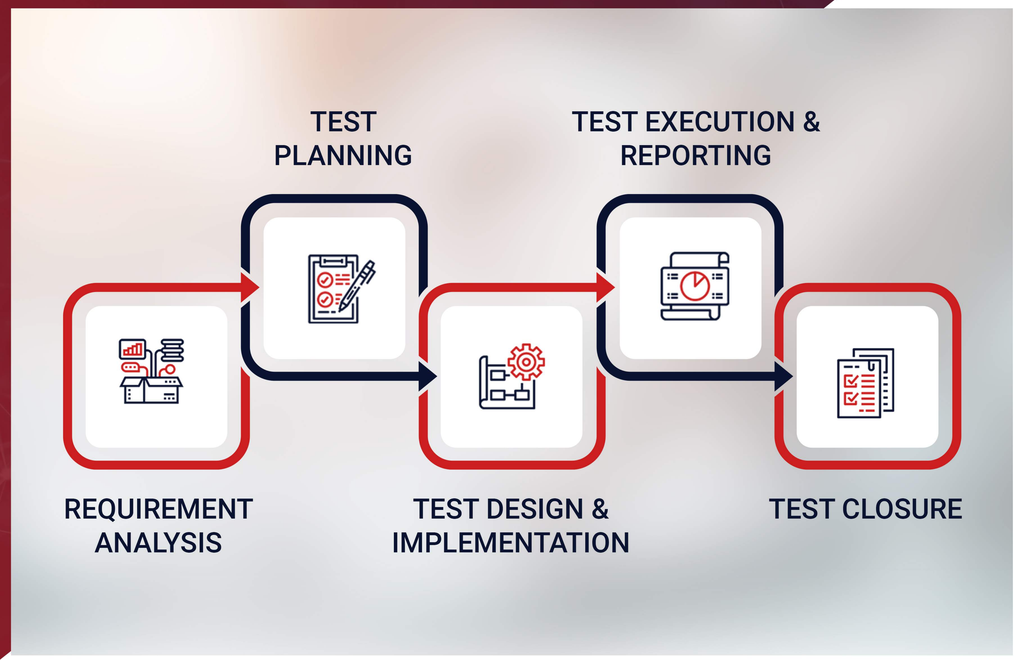
The complexities of software applications opens lot of scope for bugs entering deep into the codes. Unless these bugs are fixed and a smooth functioning of the app is established, the value for businesses cannot be generated. We spot these bugs deep down the codes, and fix them to deliver flawless solutions.
We carry expertise and experience in both manual and automated testing, and follow the best practices and a structured testing methodology, to help deliver cost-efficient, bug-free solutions.
Our premium software testing services include strategy planning, bug testing, bug reporting and bug fixing. We offer software testing services to ensure quality in what we deliver.

SOFTWARE TESTING & QA

ASSURANCE OF OPTIMUM FUNCTIONALITY WITH SIMPLIFIED PROCESSES

- ✓ Detection & Fixing of Bugs
- ✓ Quality Assurance
- ✓ Reliable & Competent Product
- ✓ Ensures Good User Experience
- ✓ Enhances Productivity
- ✓ Cost Effectiveness
- ✓ Builds Clients' Trust
- ✓ Software Security

OUR PROCESS



SOFTWARE
TESTING SERVICES

Manual Testing
For testing your application in-depth in positive & negative scenarios, our experts dig into the application from end users' perspective, to get the maximum coverage in the authenticity of the functionality.

Automation Testing
We design automation suite for covering all your calculations related to human error. It is also useful for quick regression test which saves a lot of time in validation process.

API Testing
We use PostMan tools for testing API functionality on website or portal. We also perform API automation (Rest Assured).

Performance Testing
We perform load and stress testing using the trending tools like Blaze Meter and JMeter, respectively.

UI/UX Testing
We design the scenarios in both manual & automated modes, covering all the UI/UX related validations. We make improvements in the product, as pointed out by our experts, to make it even better.

Security Testing
Through penetration testing, we verify the security of system's information data, maintaining ethical standards.

Database Testing
We perform database testing to ensure the integrity of the values that get stored in and fetched from the Database. Also, we validate the schema, tables and the data getting triggered.

User Acceptance Testing
Our testing phases are always performed by keeping in mind the user experience. We perform Monkey testing and Negative Testing to make sure the user gets hassle-free experience all the time.

DIGITAL MEDIA

WEBSITES & ECOMMERCE

"CONVERT YOUR **VISITORS** INTO **CUSTOMERS**

Built for your customers. Focused on your bottom line.

HIGH PERFORMANCE, BUSINESS-DRIVEN
